Ideas For Bathroom Remodeling

Author: Liz Wood

Bathroom remodeling is one of the most common home improvement projects. This is mainly true because bathroom remodels offer one of the highest returns on investment, and they also bring increased enjoyment to your daily life. Generally speaking, you will enjoy endless pleasure from a new bathroom up until the day you sell your house and when you do decide to sell you will most likely recoup between 80% and 90% of your investment.

The first thing you must decide on when remodeling your bathroom is how complex of a project you are interesting in investing in. This decision will of course be heavily influenced by your budget. To give you a better idea of what you will be paying for small and large projects you should know that you can remodel a bathroom for well under \$1000 if you choose. Under \$1000 is considered a smaller bathroom remodel and will typically include a new vanity top, light fixtures and accessories. A larger project will generally involve ripping out everything and starting from scratch. With this type of project you can expect to spend from \$7,000 to over \$30,000.

Once you decide how large of a project you want to take on, you must start to consider the way in which want to re-design your bathroom. There are many hot trends when it comes to bathroom remodeling. Installing dual sinks is one of the most common bathroom trends. Doing so adds great convenience and also makes the bathroom look more sophisticated. Another popular trend involves installing a large bathtub with water jets for long, soothing soaks.

Larger remodels may involve installing a new shower, separating the toilet from the bathtub and adding a steam room. If you plan on getting really fancy you may want to consider turning your bathroom into a spa area, installing marble countertops, adding radiant floor heating and even installing a steam bath/shower or customized spa shower with multiple water jets to rejuvenate your mind and body.

If your budget doesn't allow for such drastic changes to take place, you can still dramatically change the look and feel of your bathroom with a smaller remodel. Smaller remodels generally include refinishing or replacing the existing sink, shower, bathtub, and toilet. Paint jobs are also an expensive way to change the look of your walls and ceiling. Additional changes may or not include replacing countertops and vanities, and installing exhaust fans and new lighting fixtures. Lastly, retiling or renewing the tub or shower enclosures and the floors are also very common.

To assist you with your design choices it often helps to start putting together magazine clippings of features that you may want to include in your remodel. You probably won't be able to include everything that you want into your bathroom remodel, so make sure to divide the features that you "need" and the features that you "want." However, if your budget is unlimited then you can include all of your wants. Keep in mind; if you plan to change major aspects of your bathroom then you will need to create a layout of your new design on graph paper. You may need help from a professional at this point.

A professional architect, bathroom designer, or bathroom contractor will be able to assist you in creating your new layout, as well as make suggestions about the design and features. The idea is to help you prioritize your improvements. Through your professional

you can also find out more information about the costs involved and time frames needed to complete the work. This is the stage in the bathroom remodeling project where you should decide exactly what work will be done, secure financing, and begin the work.

Last, but not least, you will want to check with your contractor or with your municipality and verify whether you will need a building permit for your bathroom renovation. Failure to obtain a required building permit can result in you having to rip out your entire remodel after completion. The laws vary between municipalities and you can't always trust the word of a contractor, so make sure that you find out what the regulations are from more than just one source.

Dealing With Bathroom Remodeling Mistakes

Author: [Tim Sousa](#)

Are you looking forward to remodeling your bathroom? Bathroom remodeling is not only a lot of hard work, it is also a lot of fun. There are several advantages and disadvantages to bathroom remodeling. One of the disadvantage is the chance of something going wrong while you are doing your project; no matter how much experience you have in home improvement. Fortunately, there are ways to fix them so you can get back on track.

One of the most common problems in remodeling your bathroom, or any other home improvement project, is injury. Thousands of people injure themselves while remodeling their bathrooms each year. Even though the majority of these injuries are minor, there is a possibility of major injury as well if you are not careful. In the event of an injury, be sure you take care of it before proceeding with your project. If you need to seek medical assistance, please do so even when you want to stay to finish your bathroom. If left untreated, deep cuts will not only result in the loss of blood, they will also lead to infection. No bathroom project, no matter how wonderful the results will be, is worth getting ill over.

Remodeling mistakes are another common thing that can go wrong during your project. Not everyone has the experience of bathroom remodeling; even though many people do. Therefore, it is important that you learn a few things about your project before undertaking it. Remodeling classes and other resources are a good way to gain knowledge about your projects before you pick up your tools. Remember that mistakes are not the end of the world and they can happen even to the most experienced remodeler. Many of these mistakes include small amounts of paint spilled on the floor, using the wrong paint or even cutting a piece of bathroom tile too small. A lot of these mistakes are very easy to fix. Often, mistakes get blown out of proportion because some people do not sit back and think about their mistake and how they can correct it. If a mistake is made, be sure that you sit back and think about it so you can come up with ways in which to solve it.

After a mistake is made or after you recover from an injury, you can always return to your bathroom remodeling project. However, some remodelers might feel too overwhelmed once they start their projects. Some might not want to return to it after something goes wrong. Fortunately, if you find yourself in this situation, you can always seek professional assistance. Professional remodelers not only can remodel your bathroom from start to finish, they can also finish your project for you. If you

find your bathroom remodeling too overwhelming, do not hesitate to call your local bathroom remodeling expert or contractor and they would be very happy to help you get it done.

Bathroom remodeling had it's own sets of advantages and disadvantages. However, having a remodeled bathroom has it's own rewards that make the projects worth it.

Bathroom Remodeling Do's and Don'ts

Author: [Kinhom](#)

Bathroom remodeling is an arduous task that takes time and careful planning. The purpose of your bathroom remodel should be to enhance the ergonomics, visual appearance of your bathroom with bathroom fixtures, designs, and styles that meet your taste. Bathroom remodeling is not for the faint of heart. Although you more than likely will not install the fixtures yourself, selecting a bathroom vanity or vanities, sinks, and bathtub can be quite complex when performing your very first bathroom remodel.

Listed below are some pointers on Do's and Don'ts for your bathroom remodeling project. Take heed of these pointers so you may avoid some mistakes and ensure that the end product or the look you are hoping to achieve is what you have envisioned.

Bathroom Remodeling Suggestion #1: Don't Cut Corners

A lot of folks believe that bathroom remodeling is a cake walk that evolves changing out sinks or vanities with a new one however, since the bathroom encompasses plumbing, you need to mindfully plan out your remodel. Ensure the replacement fixtures fit the space and the plumbing of your bathroom, or understand that your bathroom may involve rerouting some pipes. Before you plan on which vanity, bathtub or sink you want, determine the basic layout of your new bathroom. If the bathroom layout is staying the same, note the plumbing layout when shopping for a new, bathtub sink, toilet, or vanities. If you're changing the bathroom layout, draw a diagram on how your bathroom should look measure everything to make sure your expectations are realistic, and then determine if you need to reroute any plumbing. We suggest that you contact a reputable plumber and get his opinion. After completing your diagram and consulting with your plumber you can start shopping around for your new bathroom fixtures.

Bathroom Remodeling Suggestion#2: Shop Around

We suggest you do not buy the first this you see rather shop around you will no doubt not have second thoughts in the end wishing you would have purchased a different fixture. We suggest that you surf the internet and view the enormous selection of the latest and traditional plumbing fixtures that are available without leaving your home. Online, you will find that bathroom fixtures are more available and affordable than at you local store. There are many bathroom fixture wholesalers who purchase bathroom furnishings in large quantity's and can offer you the item at a price that in previous years may not have been within your budget.

Bathroom Remodeling Suggestion #3: If You Have Never Done it Before, Don't Install It Yourself

Purchasing a toilet is quite different from purchasing new furniture. [Bathroom remodeling](#) in most cases will involve plumbing work. Even if you aren't rerouting

pipes, installing new bathroom fixtures takes some plumbing knowledge. Because we are dealing with water it is important that the installation be performed correctly as the potential for water damage to your home is present and could easily wipe out any savings you may have by doing it yourself. We highly recommend that you contact a plumber and save yourself time, money and headaches.

In summery when bathroom remodeling, it is important to plan your layout, shop around, and install your new bathroom furnishings properly. Failing to do so could cost you more money in the end and result in a bathroom remodel that is less than desirable.
